

## ABSTRACT

A registration management apparatus and a registration management program allow minimization of the burden on the user when making user registration. The apparatus includes an information acquisition section that  
5 acquires product information concerning a product to be registered, an authorized registration propriety decision section that decides the propriety of authorized registration of the product on the basis of the product information acquired by the information acquisition section, a condition information storage  
10 section that stores temporary registration condition information specifying conditions for temporary registration of the product, and a temporary registration section that temporarily registers the product if it is decided to be improper for authorized registration by the authorized registration propriety decision section and the product information concerning the product conforms to the temporary registration conditions.
